

Caldaia in rame a circuito termosifonico-tubature in rame

- Copper inner boiler continuous heat circulation-pipes made in copper
- Interner Kessel aus Kupfer, Heißwasserheizung-röhren aus Kupfer
- Chaudière en cuivre, circulation par thermosiphon-tuyauterie en cuivre
- Caldera a circulación termosifonica-tuberías de cobre

Gruppi termocompensati

- Heat-balancing units
- Temperaturlausgleichsgruppen
- Groupes thermocompensés
- Grupo profesional hidráulico con circulación termosifonica

T.C.I.

T.C.I. – Température contrôle indépendant

Avec la nouvelle technologie T.C.I., il est possible de gérer la température d'écoulement de chaque groupe, très simplement et avec une précision maximale. Les écrans permettent de contrôler et de gérer, en temps réel, la température de l'eau de chacun des groupes. Un circuit innovant de préchauffage de l'eau garantit une excellente stabilité thermique, y compris dans des situations extrêmes. Chaudières isothermes pour économies d'énergie.

T.C.I. – Temperatura control independiente

Con la nueva tecnología T.C.I. se tiene la capacidad de gestionar la temperatura de erogación de cada grupo individual, con máxima simplicidad y máxima precisión. Desde los display es posible controlar y gestionar en tiempo real la temperatura del agua de cada grupo individual. Un innovador circuito de pre calentamiento del agua garantiza una excelente estabilidad térmica aún en situaciones extremas. Calderas aisladas para ahorro energético.

T.C.I. – Temperatura controllo indipendente

Con la nuova tecnologia T.C.I. si ha la capacità di gestire la temperatura di erogazione di ogni singolo gruppo, con la massima semplicità e la massima precisione. Dai display è possibile controllare e gestire in tempo reale la temperatura dell'acqua di ogni singolo gruppo. Un innovativo circuito di preriscaldamento dell'acqua garantisce un'eccellente stabilità termica anche in situazioni estreme. Caldaie coibentate per risparmio energetico.

T.C.I. – Independent temperature control

Thanks to the new T.C.I. technology, each single group's delivery temperature can be easily managed, with maximum precision. From the displays, the water temperature of each single group can be managed in real time. An innovative water pre-heating circuit guarantees excellent thermal stability, even in intense working conditions. Insulated boilers to save energy.

T.C.I. – Unabhängige Temperaturregelung

Mit der neuen Technologie T.C.I. ist es möglich, die Abgabtemperatur jeder einzelnen Einheit mit maximaler Einfachheit und maximaler Präzision zu verwalten. Mit das Display lässt sich die Temperatur jeder einzelnen Einheit steuern und verwalten. Ein innovativer Kreislauf zur Vorheizung des Wassers garantiert auch in extremen Situationen eine ausgezeichnete thermische Stabilität. Isolierte Kessel für Energieeinsparung.

OPTIONAL:

- Gruppi alti
- High groups
- Höhere Brügrupp
- Haut groupes
- Grupos alto
- TURBO STEAMER - Automatico sonda vapore
- Auto probe steamer - Turbo APS
- Automatischer Dampferzeuger APS-sonde
- Turbo vapeur automatique de sonde
- Vapor automático de la punta de prueba
- Accensione e spegnimento automatico (solo modello elettronico)
- Automatic turning on/off (only programmable dosing model)
- Automatisches an/aus betriebe (nur programmierbares dosierendes Modell)
- Marche/arrêt de la machine a café (Seulement modèle de dosage programmable)
- Operaciones con./desc. automáticas (solamente modelo de dosificación programable)
